Who We Are

Our company, which entered the Fisheries Sector in order to breed aquaculture with “Turkish Salmon Breeding Facility in Marine Net Cages” in Dikmen District of Sinop province in 2019, “Trout Hatchery House and Juvenile Raising Facility” located on land in different provinces of Turkey, “Dam Net Cages”. We have started our activities by completing the necessary activities to breed Turkish Salmon from egg to 3-5 kg with the “Turkish Salmon Candidate Breeding Facility”.

The World Health Organization recommends the consumption of fish three meals a week and the United Nations General Assembly declared 2022 as the International Year of Artisanal Fisheries and Aquaculture. In addition, wild steelhead is a threatened or endangered species.

Taking these situations into account, SeaPro’s mission and production is aimed to add significant quantities of high-quality protein, reduce the world risk toward food security

Oncorhynchus Mykiss

Steelhead Salmon Trout

Salmon, classified as an fatty fish, is very healthy due to its high protein, high omega-3, fatty acids and high vitamin D content. It is smaller in size than the salmon family. In terms of minerals and trace elements, it is a leader in its family.

For your health, we produce 4.000 tons of Turkish Salmon in the cool waters of the Black Sea every year. We offer it fresh in April, May and June, and frozen during the rest of year.
